```

Figure 1: Running queries.sql on the CS166 server

queries.sql contains the following SQL queries:

-- Find the pid of parts with cost lower than 10

```
SELECT DISTINCT pid
FROM catalog
WHERE cost < 10;
```

-- Find the name of parts with cost lower than 10

```
SELECT DISTINCT parts.pname
FROM parts
JOIN catalog ON parts.pid = catalog.pid
WHERE catalog.cost < 10;
```

-- Find the address of the supplier who supply "Fire Hydrant Cap"

```
SELECT DISTINCT suppliers.address
FROM suppliers
JOIN catalog ON suppliers.sid = catalog.sid
JOIN parts ON catalog.pid = parts.pid
WHERE parts.pname = 'Fire Hydrant Cap';
```

-- Find the name of the suppliers who supply green parts

```
SELECT DISTINCT suppliers.sname
FROM suppliers
JOIN catalog ON suppliers.sid = catalog.sid
JOIN parts ON catalog.pid = parts.pid
WHERE parts.color = 'Green';
```

-- For each supplier, list the supplier's name along with all parts' name that it supply.

```
SELECT suppliers.sname, parts.pname
FROM suppliers
JOIN catalog ON suppliers.sid = catalog.sid
JOIN parts ON catalog.pid = parts.pid
ORDER BY suppliers.sname, parts.pname;
```
